2

INTRODUCTION

3

Introduction

- Consistent with trends in many cities throughout the U.S., the City of Salem has experienced shifting violence dynamics over the past two years.
- This has occurred alongside growing community concerns regarding disorder issues, homelessness, and perceived increases in juvenile involvement in serious crime.
- In addition to these increases in gun violence, partners in the City of Salem and Marion County highlighted several notable events that may impact violence and violence reduction efforts citywide, though the impacts of each of these events is unknown.

4

Introduction

- In May 2023, the Salem Police Department partnered with researchers to conduct a detailed analysis of local gun violence.
- A "problem analysis" is a set of analysis exercises designed to support the implementation of violence reduction strategies. This methodology has been developed over the last 25 years and used in dozens of cities nationally.
- This analysis establishes a common understanding of the local violence problem that guides and informs the work of civic, community, and criminal justice leaders to reduce violence.
- The problem analysis identifies the networks and individuals within a community who are at greatest risk of violence and helps tailor an intervention to reduce that risk.
- Though the methodology is informed by research, the problem analysis is primarily a practice document with implications for local policy.

5

Introduction

- This analysis examined all homicides and nonfatal injury shooting incidents in the City of Salem from January 2018 – June 2023 (excluding cases of justified self-defense, confirmed self-inflictions, and officer-involved shootings).
- This period included 86 incidents involving 102 victims. The 18 homicides involved 36 unique victims or identified suspects, and the 68 nonfatal shootings involved 114 unique identified victims or suspects.
- Note that trend data counts homicides and nonfatal shootings at the individual level (i.e., number of victims) while the violence analysis counts homicides and nonfatal shootings at the incident level (i.e., number of events).
- This analysis examines the characteristics of these incidents and the involved individuals, including demographics and criminal justice system involvement. We also examine groups/gangs and social networks at high risk of involvement in violence, including their sizes and relationships, and the spatial concentration of violence throughout the city.

13

Salem Homicides & Nonfatal Shootings: 2018 - 2022

14

Summary

- Salem's average 10-year homicide rate is 3.4 per 100,000 population.
 - This is below the average homicide rate, but it is often about 1-2 times greater than Oregon's average statewide homicide rate.
 - Relative to selected comparable Oregon cities, Salem's homicide rate has consistently been among the highest over the past ten years.
- U.S. cities experienced about an average 30% increase in homicides in 2020 compared to 2019 and nationwide, homicides continued to increase an average additional 5% in 2021.*
- Like many U.S. cities, Salem did experience an increase in gun violence in recent years.
 - When fatal and nonfatal shootings are combined, the city experienced a 100 percent increase in gun violence incidents over five years (2018 – 2022).

15

VIOLENCE ANALYSIS

16

Introduction

- Gun violence characterizes the overwhelming majority of community violence, and extant research demonstrates that fatal and nonfatal shootings are remarkably similar in terms of the people and circumstances involved.
- The following gun violence analysis examines all gun homicides and nonfatal shootings occurring between January 1, 2018 – June 30, 2023.
 - These 86 incidents include 18 gun homicides and 68 nonfatal shootings.
- This section analyzes data on victim/suspect demographics, victim/suspect criminal history, and incident circumstances for fatal and nonfatal shootings.

Total	9.1	7.4	8.5

34

VIOLENCE ANALYSIS

Incident Circumstances

35

Group/Gang-Related GV Incidents

(Motive for the incident was a group/gang-related conflict)

36

Group/Gang-Member Involvement: GV Incidents

(Victims and/or suspects were group/gang-associated, regardless of incident motive)

37

Group/Gang Members: Individuals

38

Incident Circumstances

Circumstance	N	All GV Incidents (n = 86)	% Incidents GMI
Personal dispute	21	24.4%	52.4%
Group/gang-related dispute	15	17.4%	100%
Instant dispute	8	9.3%	37.5%
Domestic dispute	5	5.8%	-
Drug-related dispute	5	5.8%	20.0%
Drug robbery	2	2.3%	50.0%
Robbery	2	2.3%	50.0%
Suspected self-inflicted	2	1.2%	-
Accidental	1	1.2%	-
Unknown	25	29.1%	24.0%

39

Summary

- The victims and suspects involved in gun violence are predominantly Hispanic (51%) and Black (10%) males (87%) between the ages of 18-34 (61%).
 - Compared to overall Salem population demographics, Hispanic individuals are overrepresented among gun violence victims and suspects by a factor of about 2.3.
 - Similarly, Black individuals are overrepresented among gun violence victims and suspects by a factor of about 7.1.

40

Summary

- Though most victims and suspects are aged 18-34, juveniles comprise a notable proportion (18%) of suspects in gun violence incidents. This proportion is slightly higher than our team has observed in other cities conducting gun violence problem analyses.
- Year-over-year trends show an increasing proportion of juveniles involved in gun violence in 2022-2023 specifically.
 - Juveniles made up about 5-10% of victims and suspects in 2018-2021.
 - Juveniles made up more than 20% of victims and suspects in 2022-2023.
- An analysis of SPD arrest data additionally shows that when the period of 2018-2020 is compared to the period of 2021-2023, there was a:
 - 320% average **increase** in the proportion of juveniles arrested for aggravated assaults
 - 35% average **decrease** in the proportion of juveniles victimized in aggravated assaults
 - 88% average **increase** in the proportion of juveniles arrested for weapon law violations.

41

Summary

- Data from the U.S. Department of Housing and Urban Development (HUD) shows a 189% increase in the total homeless population counted in Marion/Polk counties from 2020 to 2022.
- When reviewing the period of 2018-2020 compared to 2021-2023, there is no change in the proportion of suspects noted as homeless.
- However, there was a statistically significant increase in the proportion of victims noted as homeless—increasing from about 3% to about 20% of victims.
- Across all gun violence incidents included in this sample, about 15% of victims and suspects overall were noted to be homeless.
- Incidents involving homeless individuals did not differ significantly in circumstances when compared to the rest of the sample.
 - 50% were due to personal disputes, often over property, prior thefts, or miscellaneous interpersonal arguments.
 - 28% were due to unknown circumstances.

42

Summary

- According to OR criminal history data, at least 69% of victims and suspect had prior criminal justice system contact before their involvement in these incidents.
- Of those with prior arrests, most have extensive criminal involvement:
 - 54% had been previously incarcerated and 57% had been convicted of a felony.
 - 58% had prior probation and 23% were on active probation
 - 36% had prior post-prison supervision and 14% were on active post-prison supervision
 - Victims and suspects committed an average 8.5 prior criminal offenses before their involvement in the gun violence incident– predominantly property, disorder, drug, and unarmed violent offenses, respectively.

43

Summary

- About 17% of incidents involved motives relating solely to group/gang-related conflicts.
- Additionally, at least 49% of incidents involved group/gang members as victims, suspects, or both.
- Regardless of group/gang member involvement, most gun violence incidents in Salem evolve from personal disputes between known individuals (24%), group/gang-related conflicts (17%), and instant disputes (9%).

44

HIGH-RISK GROUPS AND NETWORKS

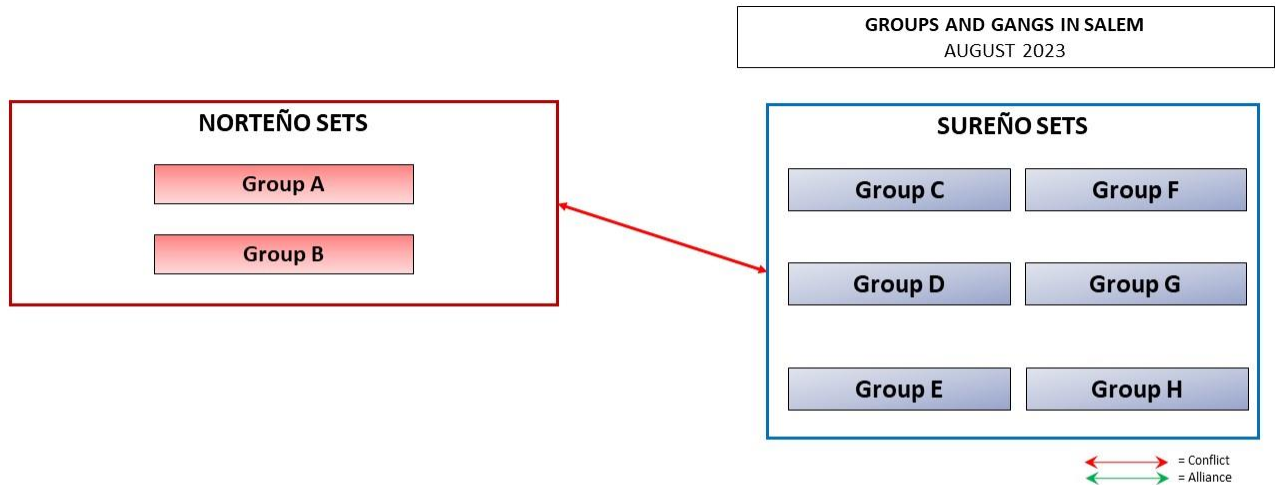

45

Introduction

- This section presents information about active high-risk violent networks in Salem.
- SPD personnel identified at least **8 active groups/gangs** in the city.
- All of these identified groups/gangs are predominantly Hispanic gangs falling into Norteño and Sureño subsets.
- Groups/gangs are engaged in a variety of criminal activities for profit:
 - Groups/gangs are primarily engaged in narcotics and weapons trafficking.
 - Members also generate criminal profit through thefts, carjackings, and marijuana crimes.

46

Identified Gangs in Salem

47

Gangs Involved in 2+ Shootings

48

Sureño/Norteño Sets Involved in Shootings

49

Summary

- SPD personnel identified at least 8 active groups/gangs in the city.
- The most violently active groups/gangs are sets of Sureños, and both Sureño and Norteño members are more often shooters than they are victims.
- Gun violence incidents in this study– of which nearly half were group/gang-member involved– cluster within about 5.2 square miles, or about 11% of Salem’s total land area.

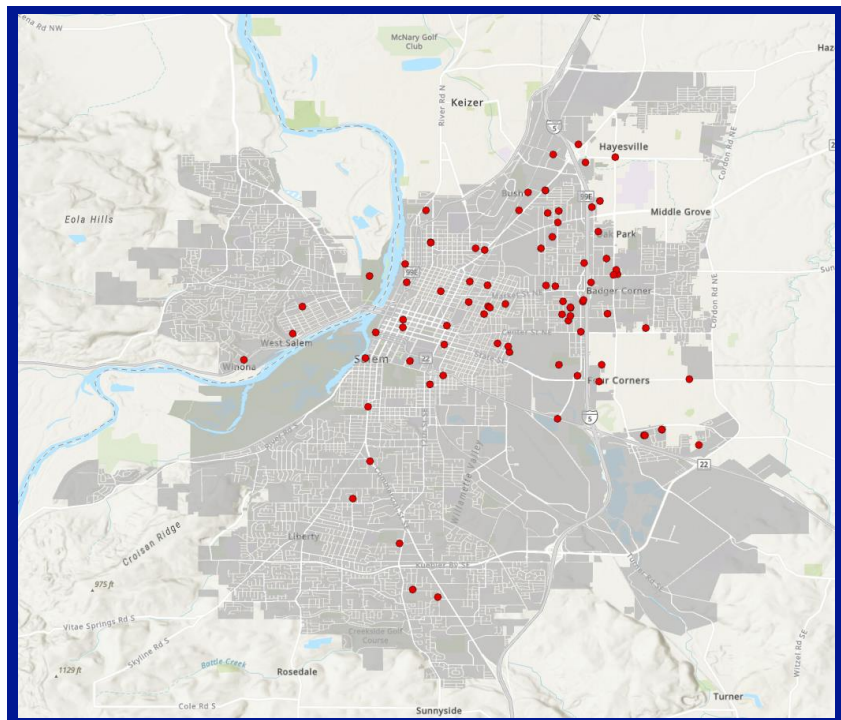

50

SPATIAL ANALYSIS

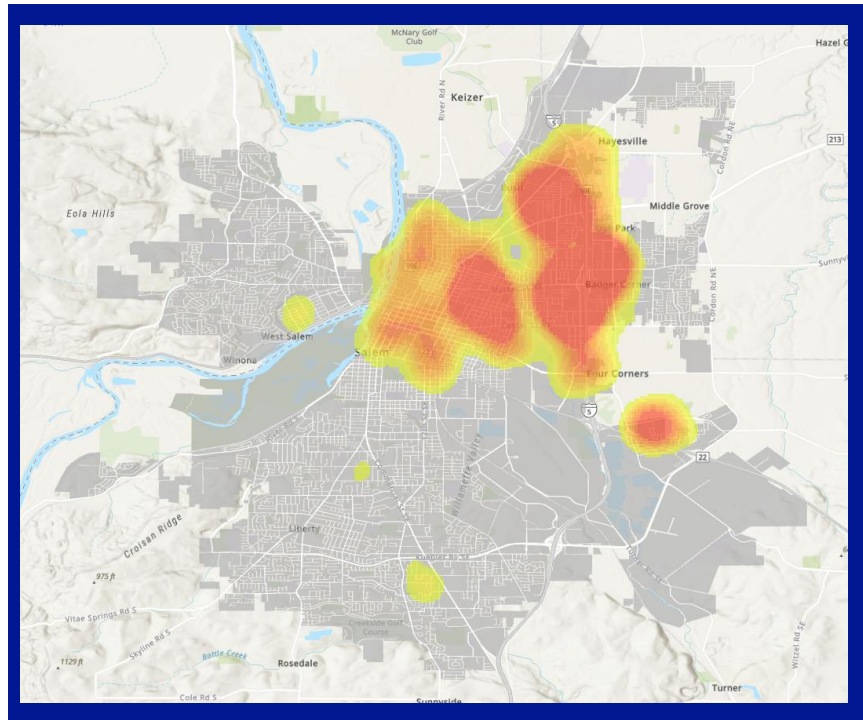

51

Gun Violence Incidents

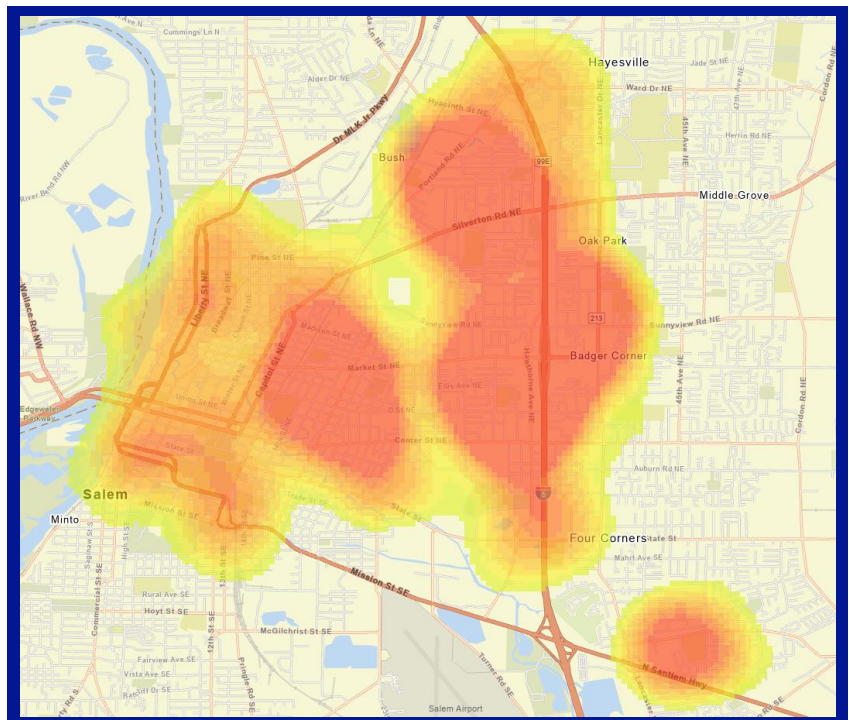

52

Gun Violence Hot Spots

53

Gun Violence Hot Spots

54

Gun Violence Hot Spots

*School and park locations from Salem City GIS

55

Summary

- Maps of homicides and shootings show incident occurrences as clustering most often in Northeastern areas of Salem.
 - Hot spots cover just over about 5 square miles, or about 11% of Salem's land area.
 - About 65% of homicides and shootings from 2018-2023 occurred within these identified hot spots.

56

GUN VIOLENCE ANALYSIS

Time Period Comparisons

57

GV Victims & Suspects: Demographics

	FATAL & NONFATAL SHOOTINGS (N=86)			
	2018-2020 (n=59)		2021-2023 (n=91)	
	Victims	Suspects	Victims	Suspects
Male	86.8%	90.5%	86.6%	94.3%
Black	7.9%	-	16.1%	8.9%
Hispanic	52.6%	61.9%	41.1%	57.1%
Age Categories				
17 & under	13.2%	-	7.1%	28.6%
18-24	39.5%	47.6%	30.4%	28.6%
25-34	15.8%	14.3%	37.5%	22.9%

58

GV Incidents: Circumstance

	2018-2020	2021-2023
Circumstance	N=34	N=52
Personal dispute	26.5%	23.5%
Group/gang-related dispute	17.7%	17.7%
Drug-related dispute	5.9%	5.9%
Domestic dispute	5.9%	5.9%
Suspected self-inflicted	5.9%	-
Instant dispute	2.9%	13.7%
Drug robbery	2.9%	2.0%
Robbery	-	3.9%
Accidental	2.9%	-
Unknown	29.4%	27.5%

59

GV Incidents: Group/Gang Member Involvement

(Victims and/or suspects were group/gang-associated, regardless of incident motive)

60

Summary

- We compared two time periods of gun violence incidents in Salem: 2018-2020 and 2021-2023.
 - There were no statistically significant changes in the sex or race of victims and suspects across these time periods.
 - There was a statistically significant increase in the proportion of juvenile suspects in 2021-2023 relative to the previous time period. There was also a statistically significant increase in the proportion of victims aged 25-34 in 2021-2023 relative to the previous time period.
- Overall, the circumstances leading to gun violence instances remained remarkably similar across these two time periods. Though, there was a moderately significant increase in the proportion sudden disputes occurring in the 2021-2023 period.
- The proportion of group/gang-member involvement in gun violence incidents did increase in 2021-2023 relative to the previous time period, but this change was not statistically significant.

61

RECOMMENDATIONS

62

Summary Findings

- In Salem, most gun violence is tightly concentrated among a small number of very high-risk individuals who share a common set of characteristics like:
 - Hispanic and Black males between the ages of 18-34
 - Group/gang involvement → Significant criminal justice history → Prior felony arrests and prior/active supervision
- At least 49% of homicides and shootings during the study period involved group/gang members as victims, suspects, or both.
- Interviews with law enforcement personnel led to estimates of less than 200 individuals associated with active groups/gangs, or less than .01% of the city's population.
- Gun violence incidents concentrate in less than 11% of the city's land area, encompassing approximately 65% of homicides and shootings from 2018-2023.

63

Recommendations

- The findings of this gun violence problem analysis should be used by the SPD and City of Salem to assess their existing and future violence interventions to ensure that they focus on the people, places, and circumstances driving the most violence citywide.
- As the SPD, City of Salem, and Marion County partners shape their ongoing violence reduction strategies, several key recommendations emerge from the findings of this analysis:

64

1. Address High-Risk Groups/Gangs

- Individuals associated with groups/gangs drive a significant proportion of gun violence in Salem. Association with a group/gang increases one's risk of being involved in a variety of violent incidents (e.g., personal disputes, group/gang-related conflicts, sudden disputes).
- ✓ Consider a group violence reduction strategy (GVRS) in the City of Salem that relies on collaborative partnerships between community-based organizations and criminal justice agencies. The development of this GVRS should allow for ongoing innovation and flexibility to address the more fluid and dynamic nature of group/gang associations in the city.
- ✓ Proactively identifying and intervening with groups/gangs and involved individuals at the highest risk for violence reduces their risk of violence offending and/or victimization. Increase SPD and partner resources dedicated to intelligence gathering and enforcement operations for groups/gangs and involved individuals at the highest risk for involvement in violence.

65

2. Engage VHR People

- Those at the very highest risk (VHR) for involvement in gun violence as victims and/or offenders are identifiable and share several common characteristics.
- ✓ Utilize the data-informed VHR characteristics included in this report to inform who is prioritized for outreach, service delivery, and/or enforcement.
- ✓ Partners stated that the City of Salem lacks organizations capable of providing intensive case management or mentorship to very high-risk individuals. Identify community-based organizations (CBOs) to work in partnership with the Salem Police Department to engage VHR individuals and provide these critical services.
- ✓ Develop partnerships and processes to share information and generate referrals for collaborative intervention.
- ✓ Partner with the Department of Corrections to share information about high-risk individuals being released back into the community. Coordinate with CBOs and other providers for reentry services to reduce recidivism risks.

66

3. Identify and Engage Highest-Risk Youth

- While the majority of individuals involved in gun violence were aged 18-34, juveniles did comprise a relatively large proportion of gun violence suspects and youth were increasingly involved in violence in 2022-2023.
- ✓ Partners felt that the sharing of gang-related intelligence, especially as it pertained to youth, was lacking since the disbanding of the Gang Enforcement Team and removal of SROs from the Salem-Keizer School District (SKSD). Create formal partnerships and processes for reciprocal communication between school and law enforcement personnel focused on young people at the highest risk for involvement in gun violence.
- ✓ Identify community-based organizations that specialize in intensive case management with at-risk youth. Create relationships and methods that allow the Salem PD to make referrals to these CBOs as at-risk youth are identified.

67

4. Focus on High-Risk Places

- Violent hot spots in Salem are tightly clustered and cover approximately 11% of the city's total land area. About 65% of all homicides and nonfatal shootings from 2018-2023 occurred within just over five square miles.
- ✓ Focus patrols, targeted enforcement, and problem-oriented policing efforts in these locations. Concentrate intelligence-gathering on the VHR groups/gangs and criminal activities driving violence in these areas. Update place-based enforcement priorities regularly to ensure that activities are consistently directed toward the highest-risk areas.
- ✓ Citywide outreach, service delivery, and other place-based crime prevention projects should prioritize individuals and neighborhoods within these noted locations.

68

5. Strengthen Criminal Justice System Partnerships

- About 69% of gun violence victims and suspects were known to the criminal justice system prior to their involvement in a homicide or shooting. Of those, most were extensively criminal justice system involved. About 54% had been previously incarcerated, 57% had been convicted of a felony, and they had committed an average of nine prior criminal offenses.

- ✓ Develop processes to identify to court personnel the VHR and/or group/gang-involved individuals who are arrested for gun or violent offenses with the goal of immediate intervention to reduce one's risk of violent victimization or offending.

- ✓ These partnerships can aid in bond/sanction considerations that may reduce the likelihood that individuals known to law enforcement will reoffend, retaliate, or be released back into gang-on-gang conflicts where further violence can occur.
