Subject: Feb 11th council meeting items

Dear Councilor Kaser,

I'm writing as your constituent to offer my thoughts on two important items that will be presented at the council meeting on February 11th:

Item 3.3c There are a couple bills that I strongly disagree with the recommendations of the Legislative Committee on:

HB2001 should have the support of everyone who is concerned with healthy cities and affordable housing. There is simply no legitimate policy interest in the regulation of the number of locked doors within a detached residential structure. If you are concerned about density, regulate the number of residents. If you are concerned about parking, regulate the number of parking spaces. Limiting the number of units within a structure limits the amount of houses available and the amount of options a property owner has, which drives up the cost of housing. The City of Salem has an interest in increasing housing options and decreasing housing prices, so it should support this bill.

HB2306 is a common-sense measure to increase the speed with which new housing is permitted in Oregon. It is already a tool that is in operation in many states and has not caused significant problems. The City of Salem should be concerned with the provision of new housing, given that the state of Oregon is in a housing crisis caused by insufficient supply of new housing.

Item 5.a Salem is probably the worst city in Oregon to walk in, which probably puts it in the lower third of US cities for walking conditions. The reason for this is primarily the level of regional traffic that is funnelled through the city due to the lack of provision for crossings of the Willamette River. Because the conditions for biking and walking in Salem are so unfavorable compared to driving conditions, and because biking and walking are considerably better for the environment than driving is, every transportation decision the City Council makes should be made with an eye toward improving biking and walking conditions. While the Salem River Crossing is primarily a project for motor vehicles, it will significantly benefit people biking and walking by removing regional car traffic from city streets. Unfortunately, ODOT's design has major impacts on the neighborhoods on the eastern bridgehead and west of Marine Park. However, the benefits of this project to the city as a whole outweigh these impacts, so the project should be approved by the Council while continuing to press ODOT for changes to the bridgehead designs.

Thank you for your time in considering my opinion on these issues, and for your service as city councilor.
Please let me know if there is anything else I need to do to put my opinion into the public record on these issues.
I have only recently moved to Salem and every city treats public record a little differently.

Thanks,

Alex Bauman

Subject: Support the Motion to respond to LUBA

Dear Councilor Nanke,

I'm writing to you to urge you to vote YES on the Motion to respond to LUBA's remand of the City's UGB expansion decision concerning the Salem River Crossing. As a city resident, I know how the traffic congestion caused by the bridge negatively impacts the quality of life in Salem.

I support alternative modes of transportation to get around town but oftentimes walking, biking and using the bus are not viable options, especially for families that need to get to work, school, practice, the doctor, grocery store, and many other destinations.

The Congestion Relief Task Force Results indicate that Salem will see a 20% population growth over the next 20 years. A statistically valid poll conducted in late 2017 shows that 77% of Salem residents support a new bridge. As representatives of the residents of Salem, please let these voices be heard by voting YES on the Motion. Abandoning this process now could set back the option to build a new bridge for decades.

Thank you for your consideration.

Sincerely,

Aaron Beck

Subject: Dirt on the missing Third Bridge dirt

Today I received important information from a trusted source about huge amounts of missing dirt from the west bridgehead location of the Salem River Crossing project. This missing dirt reportedly hasn't been factored into cost estimates for the bridge. Please consider the blog post I wrote about this to be testimony submitted for the SRC agenda item in tonight's City Council meeting. Here is the link. I'll also copy in the blog post to this email.

<https://hinessight.blogs.com/salempoliticalsnark/2019/02/the-dirt-on-the-missing-third-bridge-dirt.html>

The dirt on the missing Third Bridge dirt

If City Councilors want more reasons to vote NO at their meeting tonight on whether to keep the Salem River Crossing (Third Bridge) project alive, here's disturbing information on missing dirt from the area where the west bridgehead would be located.

This morning I received this "dirt on the missing dirt" from a trusted source, who said:

Here is documentation that the Salem River Crossing project management team is misleading the Salem City Council by withholding and misrepresenting information about the costs of the bridge and seismic safety.

What is the foundation of all bridge planning? The ground upon which to build a bridge. Well, what happens when the ground is literally pulled out from under the bridge and the bridge planning managers fail to acknowledge it is missing?

The public ends up with an unrealistic bridge plan and cost estimates because public officials have withheld information from elected officials for years in an apparent effort to keep the estimated bridge cost estimates unrealistically low because they do not acknowledging the ground is missing.

(This concern about managers withholding information also applies to greenhouse gas emissions and impacts on downtown businesses, which I could provide to you also.)

The Walling family owns the west "bridgehead" of the Salem Alternative and they opposed routing the bridge across their property. Walling called publicly for the

proposed bridge to be moved off of his land and when it was not, he removed the land and left an enormous hole where the west end of the bridge was to rest.

The full comment that was submitted by Walling for the DEIS states:

"Your recent Statesman Journal article regarding the addition of a new bridge crossing the Willamette River into West Salem is causing great concern. This is a concern that needs to be brought to your attention immediately.

Although we understand the need for an additional route into West Salem, we fail to see how one of your proposed routes—which would severely disrupt an 80 year old locally owned business—would be considered, as it would directly impact an already highly congested area.

In addition, this latest proposal would route the bridge traffic through our mining operation, which would directly impact a significant number of construction companies who use our material for road and highway paving, parking lots, curb and gutter, and, ironically, bridge construction.

In the immediate Salem area there are a very few gravel mining operations with enough capacity to provide the necessary materials for major construction projects. Should your plan be accepted, builders and construction companies would be forced to source material outside the Salem area, which would impact local businesses and their employees.

We encourage you to take great care in your decision making process rather than eliminate acres of opportunity for the local economy."

Since work on the bridge planning did not stop, the Wallings appear to have decided to take matters into their own hands and literally pull the ground out from under the west side of the bridge.

Excavators and trucks the sizes of large buildings worked five or six days a week for most of two years to remove the dirt from the proposed pathway across the Wallings property and sell it or stack it up on their property out of the way.

Removing all this ground leaves the west end of the bridge up in the air and greatly increases the costs to build taller and strong bridge supports. On the east end of the bridge there is a high bank with Front Street on top. On the West side there is a 30 foot deep hole which will eventually fill with water and be the Walling Phase III Lake.

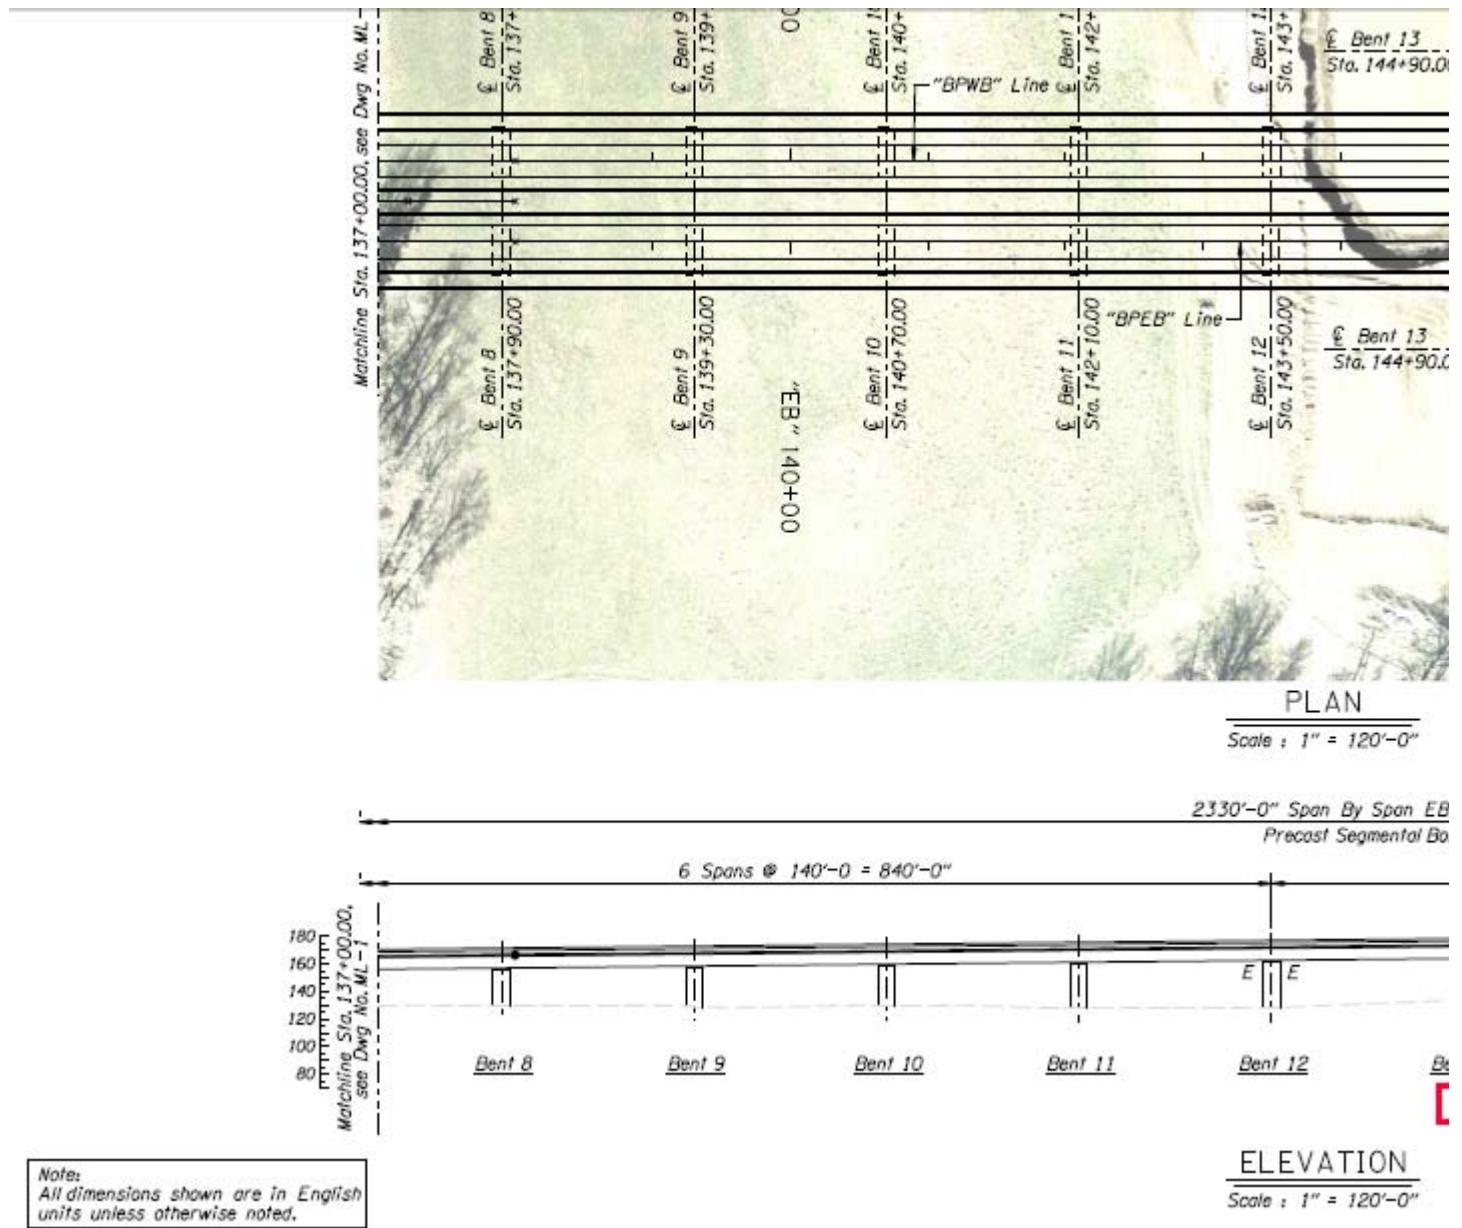

As noted above, this dirt did not suddenly vanish, instead it was removed one dump truck-sized excavator scoop at a time over about the last eight years. The bridge planning managers know it is gone but will not factor in the costs of replacing the missing ground into the cost estimates.

The bridge planning manager also will not acknowledge the extra costs to build on the unstable slopes of the steep cuts that were created by the excavation. (Documentation of the increased costs of building on the steep cuts will be provided to you in a separate email and also show that the bridge planning managers acknowledge the missing ground in some technical reports but not others.)

This [link](#) includes an image from a presentation Mike Jaffe made to the SRC Oversight Team in September of 2014. It shows the excavation of the ground under the west bridgehead is well underway.

Yet, the "draft" SRC Construction Impacts "Final" Memo posted by the City of Salem dated June 2016 shows what the "Existing Elevation" was when the excavation had just barely begun. This documents that the cost estimates do not account for the missing ground.

Also, all property owners along the proposed route were to be given notice of on-site field surveys to be conducted after the Salem Alternative was approved by the SRC Oversight Team in 2013 or 2014. This second round of on-site visits was to be used to update information from the DEIS and prepare the Final EIS. However, the information for the Construction Impact and Geology technical reports relies on surveys from 2009.

[SRC Geology Final Tech Report Addendum](#) published September 2016 reports on page 2.2 that the most recent site visit was clear back in 2009:

"Based on observations from the site visit in 2009, in the vicinity of the gravel mining operations..."

Is it reasonable that the Salem River Crossing management team did not use readily available remote sensing images that give topographical information to update reports issued in 2016? Should the management team have authorized revisiting the gravel mining operations again since there were active mining operations and the report states on page 4-2:

"4.2.1 New Bridge/Gravel Pit Area

Proposed layouts indicate that five to six of the bridge piers, or "bents" would be constructed in the gravel pit, or near the steep side slopes of the pit. The pit has filled with water, which could also make construction more difficult and require cofferdams and dewatering. Figure 4.2-2 shows where the bridge piers would be constructed near the old gravel pit (see Figure 4.2-1 for the location in the APE).

Portions of the bridge structure would overlies an area of continued gravel mining. This could result in poor foundation conditions, or lateral loading from unstable side slopes that could impact the structures (Figure 4.2-3; see Figure 4.2-1 for the location in the APE).

The project would be required to acquire sufficient adjoining ground so that stable slopes could be maintained during future gravel-mining operations. The property acquisition might also include placing deed restrictions on the adjacent mining operations to limit the slope angles and depth of excavation next to the acquired right-of-way."

There is reason to be concerned about the reasons why the SRC management team might have excluded the area of the gravel mining operations from the second round of on-site surveys. This might have been done because they did not want to base the bridge cost estimates on the amount of ground that had actually been removed and the expanded areas of the steep slopes left after additional years of excavation.

Sincerely,

Subject: Salem River Crossing Hearing

Please consider the following comments when you decide whether or not to proceed with planning for the expensive, environmentally damaging 3rd bridge contemplated in the draft EIS.

I was appointed to the Salem River Crossing Task Force to represent bicycling interests. Early on, I was asked by another Task Force member if I could participate in the process with an open mind and I assured him that I could. (Ironically, it appears that others on the Task Force had made their minds up long ago that a mega-project was needed.) At that time, I had no opinion about the need for or viability of another bridge. As the process unfolded over the next six years, it became increasingly clear that the citizens on the Task Force were just there to allow the bureaucrats to check a box. Our input was ignored and our questions went unanswered. When I proposed that we consider other more economical ways to address motor vehicle congestion, I was told that we could only consider alternatives that fully accommodated the questionable long-term projections of motor vehicle demand. Clearly, the planning process was designed and destined to produce a mega-project.

When I applied the criteria we developed for evaluation of the alternatives to the No Build alternative I discovered that No Build actually performed better under those criteria than any of the other alternatives. Of course, project staff who were operating on the assumption that a mega-project was desirable and the commitment to deliver one were not interested in that evaluation. In the end, the impacts of all the build alternatives with their freeway style approaches and destruction of neighborhoods were too much and I voted with the other citizens for the No Build alternative, not because I didn't think some improvements were needed, but because we were not allowed to consider any of them.

Some bridge proponents have asserted that bicycling would be improved by a 3rd bridge based on an "evaluation" that MWVCOG staff and the consultants performed in July 2012. This evaluation is little more than a back-of-the-envelope effort that focuses on quantity rather than quality and reaches its conclusion based simply on the fact that there would be a couple additional miles of bike lane on a new bridge. Nowhere in the evaluation is there consideration of the detrimental effects on walking and bicycling of the bridge and the freeway style approaches. Recent studies have demonstrated the hazards to pedestrians and bicyclists of the kinds of road configurations contemplated for the 3rd bridge. Despite the fact that I was the bicycling representative on the Task Force, I absolutely no role or input into the evaluation that purports to show benefits.

The elected officials who are promoting construction have been remarkably elusive with respect to how a new bridge would be paid for. Both the Task Force and Steering Committee heard multiple presentations from the project team about the funding options — tolls, vehicle registration fees, and gas taxes — and the likelihood that significant local funding would be necessary. The members of the Task Force were repeatedly assured that a funding plan was an essential component of a draft EIS. Those assurances were later modified to indicate that the funding plan would be in the EIS. Now, nearly ten years later, there still is no concrete indication of how policy makers intend to raise the approximately

\$1 billion dollars that would be needed to repay bonds issued to fund construction and the only information about funding lies buried on the Salem River Crossing project webpage. Despite the absence of a funding plan, tolling has remained one important component of any of possible approach. Interestingly, the project

consultants' own evaluations demonstrate that tolling the existing two bridges would yield similar congestion relief to an expensive new bridge.

As a former member of the SRC Task Force and appellant of the city's land use decision, I urge you to demonstrate the courage to end this ill-conceived, poorly executed, and overly expensive debacle now. Once the City Council kills the extravagant mega-project, the transportation planners and the community will be able to begin working on more reasonable solutions to address congestion that don't result in more pollution and the loss of livability in those neighborhoods that would otherwise be affected.

Hi Cherrill, et al-

This story regarding the “Third Bridge” has merit. The current City design is insufficient to gain full credits from the funding federal agency. It does not perform as an uninterrupted passage of regional traffic. Why has the bridge been designed out of alinement with the North Parkway? Why is it extended more expensively over the private ponds at River Bend? Why is there no ramp designed from the Marion Street Bridge to connect with “Marine Drive” for gradual release of City traffic into the Wallace Road corridor?

You have investigative news reporting assets. Please take interest.

Thank you.

Subject: FW: Salem Third Bridge Study & Correction: Seismic, Ramps and Marine Drive First Priorities

Good morning, Chuck and Tom-

The attached is my continued support of the “Third Bridge” sent to the City. However, the current design from the City is an unquestionable disaster if it is not corrected. In reflection of the \$10 million invested to date, the current attention of the Federal government must be maintained and refreshed immediately with a design that illustrates that regional and national commerce may flow though without any stops or interruption. It must indicate a project meritorious of federal funding; not just a local inconvenience.

Invested and knowledgeable citizens must recognize the continued failure of the City to provide comprehensive planning. This challenge deserves our support; but not a rubber stamp. If such things as Peter Courtney’s home may be in the physical path of the extension of the North Parkway, it may be relocated on similar River frontage.

Please read and study the details of my memorandum to the City and consider its immediate merits. Share concern and reach out.

Thank you.

Gene Pfeifer

Subject: FW: Salem Third Bridge Study & Correction: Seismic, Ramps and Marine Drive First Priorities

HOW TO PROCEED WITH SALEM, OREGON TRAFFIC PRIORITIES; YET SAVE A 10 MILLION DOLLAR INVESTED INTEREST WITH THE FEDERAL GOVERNMENT?

Hi Jim-

You have been most passionate about this topic; so this memorandum is being directed to you, and shared with the whole City council.

Great Need to Work Together:

It is up to you, and yours, to show your fellow council members that you are willing to work with them; thus, they may cooperate on the long term for what is essential for the viability of Salem to be sustained. It is clear that well before Salem grows to twice its current size, that traffic will come to a dead stop if regional and national traffic are not fluently guided away from the living City core.

However, a new bridge will take years to materialize. What needs to be accomplished first? New council members ran much of their campaigns stating that the congestion needs to be fixed now. Not years from now. They have been admirably concerned about the fiscal responsibility of their actions. As you have repeatedly heard from me in the past, the current bridges need to be seismically upgraded; ramping studies by ODOT about 20 years ago need to be put into action; there needs to be proper storage lanes both on and of our current transportation facilities; West Salem development needs to be curtailed until proper traffic facilities and other municipal services are known to become improved in current time.

On December 6, 2018, there was a “Public Policy Session” at the Chamber to review the “Findings: Salem’s Congestion Relief Task Force”. Peter Fernandez had three minutes to present sheets of information that, was mostly history, statistics and the retraining of humans out of old driving habits. The site plan, showing the tie-in of the proposed new bridge was not even discussed. What did about 40 politicians have to talk about for the next 75 minutes? Shamefully, they complained, incorrectly, about those who were dragging their feet only cared about “trees and bicycles”.

True Freeway: Federal Interest May Continue; But Not Be Priority in Sequence:

Having studied the Fernandez site plan and bridge location, it is rather easy to point out its predictable failures. Additionally, by correcting these flaws before they are stubbornly designed and constructed, we may draw the Federal Agencies back into professional and monetary interest without jepordizing their current anticipated action of abandoning Salem’s “Third Bridge” as a non-realistic regional project; but just a local adjustment of arterials. Do not neglect the people of Salem with loss of Federal interest; by arguing for a half-baked solution. Together, illustrate that the project scope will be elligable for federal funding in the appropriate and safe movement of national commerce in the future..

Suggested Plan Corrections:

Attached are several sheets that were produced by Mr. Fernandez in December. One has been marked in red to illustrate how the proposed bridge may become an actual freeway to move regional and out of state traffic through and away quickly with less cost and no stops to tie up local traffic. The marked sheet also illustrates how we may move our local and daily traffic more quickly and safely. This is in huge contrast to the City’s colored sheets that propose that three more lanes be added at the south end entry onto Wallace Road. This will never work. The necessary stop lights to provide cross traffic remain the same.

Move Proposed bridge North:

My sketch in red shows that to have free flowing “freeway” traffic by use of a new bridge, the inlet of traffic coming from the north must be moved north several hundred feet to align with the current straight pattern on the North Parkway. My proposed location may also be only two spans, and only about 1300 feet that would be elevated. The Current plan, also attached in the PDF, is multi-span, and about 3600 feet that is elevated. Current design is also through a settling pond on the apparent River Bend private property. Additionally, my design encourages a single deck bridge; instead of two separate and parallel bridges.

Critically, the current plan inlet from the east, several hundred feet south of the Parkway, then on Commercial Street, causes local traffic and through traffic to seriously congest at turns and stop lights. It will not be a freeway bypass as illustrated. Just another mess. Similarly on the west side, the traffic goes through a traffic circle, a controlling method for local streets; not appropriate for a freeway with truckers with three trailers in tow.

Marine Drive Necessary:

Moving south then on the Marine Drive Bypass, it should be an elevated freeway, expressway, for two reasons. Noise control, so the traffic sounds will move vertically rather than horizontally; and to guarantee that there is absolutely no need for any stops on the freeway. All side traffic, which feeds the access to Wallace Road intermittently, must ramp on or off the expressway. No Stops. There must be good length to the on and off vehicle storage lanes as well.

Marion Street to Marine Drive:

There is ramping then directly to Highway 22 as shown; but also traffic must flow off the Marion Street Bridge as in my sketch. This will then take the traffic from City Center on Marion Street and have it evenly distributed onto Wallace Road from this new expressway; and with very little traffic attacking the south end of Wallace Road.

Ramps Beyond Center Street:

Much of the local traffic may then be controlled to go north on the new bridge. All through truck traffic must go north from Highway 22, and south from the North Parkway. However, perhaps half the local west Salem traffic will still try to go east. It has to be accommodated in the same manner that Marine Drive helps soften the traffic onto Wallace Road. To do this, the east off ramps on the Center Street Bridge must flow similar to a freeway, and not be forced to stop. The access to the Carousel must be from the north on Front Street only; and exist to the south on Front Street. All this must have adequate in and out vehicular storage lanes. The same in and out expectations must be maintained for the TJ Sullivan building, and soon to come, other buildings. Either a tunnel under, or a foot bridge over, the rail road will be required. And do not say the RXR will not let you. What did Keizer Station do?

Additional length for the free flow of traffic from the Center Street bridge must be provided by cutting across a portion of the old paper mill property with one or two no stop lanes onto South

Commercial Street. Also, traffic from the Center Street Bridge should no longer come to a stop at Front Street under the Marion Street bridge. It must automatically flow north along the west side of the Marion Street Park. However, the storage lane, to keep the traffic moving off the Center Street bridge going north on Front is insufficient. My suggestion is to have it continue on Front, making Front Street, as it goes past Truitt Brothers Cannery, become an essential part of the traffic relief system in the future. This is said, tongue in cheek, thinking that the Truitt facility may not be part of the future. As conceived, a Front Bypass clear up the connection of the North Parkway will not interfere with normal local traffic flows servicing Portland Road from Liberty Street.

Commercial to Marion:

Finally, traffic coming south on Commercial Street should move onto the Marion Street bridge without stopping. Two lanes may already be available on Commercial and the bridge would have to be widened for merging traffic lanes while still over solid land.

Fifty Year Constipation:

The City's transportation system has become "constipated" ("To cause to become slow moving or immobilized; obsolete") from 50 years of hesitation.

The time is now to act; that action is not just a new bridge. By logical shortening of spans and reduction of land purchases by immanent domagne, the costs previously projected may be drastically reduced. Do the projects prudently, such that use of unsocial toll bridges shall never be considered.

Realistic Funding and Priorities:

State, Federal and minimal local funds: Priority One: fix the current bridges; provide ramping and proper vehicle storage; Treat the traffic into parts of the City on Center and Marion Streets for what they truly need be as "freeways"; provide pedestrian access means to facilitate the flow of traffic.

Federal Funding; not local funding: Priority Two: Show designs **now** that illustrate true movement of regional and nationally beneficial freeway traffic. Help the Federal government see honest progress that will justify not cancelling what has already been a \$10 million investment. Request federal funds for Marine Drive first and the third bridge second.

Closing:

These ideas are not construed to be the only and end all. However, public funds may be saved, point the way for realistic funding, and provide direction to avoid the continual tendency in Salem to not fix old assets before celebrating new.

Thank you.

NORTH
TURNPIKE

CONGESTION RELIEF TASK FORCE

A Technical Review of Transportation Infrastructure Options

Longer-Term Options

The Task Force evaluated several packages of potential improvements. The most promising packages are described below. The Task Force did not reach consensus and therefore are not recommending these for further study.

Center Street Bridge Package

Summary

- Improves Wallace Rd. and Front St.
- Bottlenecks still exist at both Commercial St./Front St. intersections
- Project Cost: \$100–\$137 million

Marion Street Bridge Package

Summary

- Improves Commercial St., Marion St., and Wallace Rd.
- Weaving (lane-changing) on bridge still occurs, and with five lanes
- No improvements for Front St. on-ramp to bridge
- Project Cost: \$55–\$65 million

Considerations

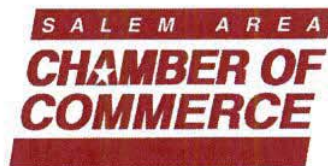

- Solution packages are beyond current available revenue.
- Based on the existing analysis, the benefits may not be long lived. Travel times initially could be reduced by as much as 50%, while some areas may not see any reduction. Travel times could return to preconstruction levels within 10 years.
- Making a single improvement, rather than implementing the whole package, could help in the immediate area, but it would either move the problem to a different spot, or fail to relieve overall congestion in the area.

February 11, 2019

Dear Mayor Bennett & Salem City Council,

I am writing to you on behalf of the Highland Neighborhood Association (HNA) to share the below resolution and the attached letter from HNA to the Salem City Council. The letter was also sent to the Salem River Crossing Project Task Force and the Salem River Crossing Oversight Team at the time. The January 21, 2008 letter and the May 9, 2013 board adopted resolution are the only communications the Highland Neighborhood Association has issued regarding the Salem River Crossing Project:

“BE IT RESOLVED, that the Highland Neighborhood Association recommends the Salem City Council, other local government entities such as the Salem Keizer Area Transportation Study, along with the Oregon Department of Transportation, focus efforts on low build/no build options as opposed to any of the currently proposed alternatives.

The Highland Neighborhood Association opposes any proposed bridge design which requires elevated approaches and/or is incapable of being integrated with the existing street grid.”

I served on the Salem River Crossing Task Force from 2006 through 2012, representing the Highland Neighborhood Association. I was appointed to the SRCTF by then Salem City Councilor for Ward 5, Rick Stucky, whose Ward boundaries at that time included the entire Highland Neighborhood Association. I closely participated in the Salem River Crossing process from the inaugural October 4, 2006 SRCTF meeting through the final meeting on August 15, 2012, and continued to attend multiple SRC Oversight Team and Salem City Council meetings. Along with other “Highlanders,” I worked on this topic with former Ward 5 Councilor Diana Dickey, Ward 1 Councilor Chuck Bennett and Ward 1 Councilor Cara Kaser, as well as representatives from adjacent neighborhoods, groups, individuals and interests.

Because this proposed project generates strong feelings, there have been many passionate statements and representations made by community members. The Highland Neighborhoods Association hopes and expects that Salemites from our neighborhood and from our sister neighborhoods will continue to share their viewpoints about the “third bridge” project. Those viewpoints represent the opinions of those individuals or groups and are not made on behalf of the Highland Neighborhood Association.

Thank you for your service to Salem and best wishes as you deliberate on this challenging topic.

Sincerely,

Darlene Strozut
Highland Neighborhood Association

Highland

Neighborhood
Association

January 21, 2008

Dear City of Salem City Council:

I write on behalf of the Highland Neighborhood Association (HNA); one of the 19 neighborhoods in Salem, Oregon.

Salem's historic Highland Neighborhood is our City's east side ground zero for a possible third bridge across the Willamette River. Through representation on the Salem River Crossing Task Force (SRCTF) and the diligent participation of many neighborhood residents and property owners, we have become educated about escalating transportation demands and the traffic challenges facing our West Salem neighbors. HNA has consistently worked to ensure that the SRCTF is cognizant of potential impacts to east side neighborhood livability and quality of life.

Highland is a rejuvenating, forward-looking "village within a city" that has drawn families and individuals to its diverse charm, its history as one of Salem's earliest subdivisions (and former home to a U. S. President) and, especially, its neighborliness. We are excited about the revitalization occurring in north Salem; both within our neighborhood boundaries and in neighboring associations. The North Broadway developments in Grant, the Kroc Community Center in Northgate, along with redevelopment of the State Fairgrounds just to the east, complement projects within Highland's historic Hollywood District: the new Salem Senior Center, the expanding Salem Clinic, a new Walgreen's, and thoughtfully planned residential projects. All of these are the result of decades of planning and teamwork between the City and the its north Salem associations, creating opportunities for private developers and community partners.

The Highland Neighborhood Association has not yet adopted a position regarding a river crossing. We are dedicated to preserving the character, cohesiveness and livability of this unique neighborhood and to valuing families who live in our neighborhood as highly as the vehicles that travel through them.

Because a new bridge and, especially, its supporting infrastructure, would dramatically and permanently alter the historic Highland Neighborhood, our decision will be largely influenced by the degree to which any new vehicular infrastructure minimizes its footprint and intrusion into established neighborhoods. Among the questions that need to be addressed as part of the planning process:

- To what extent will residences and businesses be displaced or impacted?
- Will Pine Street traffic become a barrier for children walking to and from Highland School and Highland and River Road Parks?
- How will railroad crossing traffic be accommodated?
- How will traffic be managed so it isn't "dumped" onto Broadway or other streets?
- Will ramps and associated infrastructure attract illegal activity and create blight?
- How will green space, river accessibility and pedestrian connectors to other parks be planned into the project?
- Who will ensure that funds remain available for vital details throughout the completion of the project?

The Highland Neighborhood Association deeply respects the work of the SRC Task Force and the Oversight Team. We will continue to be fully engaged with the Salem River Crossing process and are committed to working toward a solution that will not be at the expense of the citizens of north Salem.

Sincerely,

Nomi Pearce, Chair
Highland Neighborhood Association

Subject: Ward 7 resident support for vote to not fund 3rd bridge work further

Councilor Cook and Mayor Bennett,

My wife and I live in Ward 7 and are not in support of any future City funding of a third bridge crossing the Willamette River. We have studied this issue and feel that it is clear there is no need to continue studying this and throwing money at it. We hope the Council moves quickly to consider other options to reduce congestion on the existing bridges (e.g., tolls, improvements to feeder roads, etc.).

We realize this evening you will hear from many residents in favor of a third bridge and many opposed to future consideration. We are unable to attend and appreciate your time factoring our position into your work. Thank you.

Subject: Consider all of mid-valley before bridge decision

Good afternoon.

I would like to add my voice to the many who would like to see another route across the Willamette river in the Salem area.

There have been too many times where safety has been compromised by accidents and back ups on the crossings we now have.

Gridlock does not just effect those who live in West Salem. It effects anyone in Polk county that might need to get across the river. Emergency vehicles, merchants, those who live and work downtown and many others.

Please consider moving forward with the bridge process. Do not ignore the work that has been done and the voices of those from all over the area who would like this process to continue.

Thank you.

9 February 2019

Honorable Chuck Bennett, Mayor of Salem
and the Salem City Council

RE: The Need to End the Salem River Crossing EIS with “No Build” Decision *and* an Official Lessons-Learned Inquiry Into the Project

Time is short before your Monday meeting, so I won’t repeat the many objective reasons you should end the Salem River Crossing EIS with a “no build” decision. Suffice it to say that its most adamant bridge boosters doomed the SRC at the very start by their absolute refusal to deal fairly and honestly with alternatives for dealing with cross-river traffic. That key failure destroyed all public confidence in the SRC oversight team and its technical management staff and, therefore, all sense that the EIS process had any integrity.

The inherent flaws in the SRC project and oversight team approach are so common in government projects and were so glaring that they jumped out at me in 2007 when I arrived in Salem as a complete newcomer, having no preset ideas about a bridge. But I moved here from Lansing, Michigan, another capital city of similar size, which suffers terribly from highway projects that were sold as “revitalization” and “progress” but that only served to hasten and deepen the city’s decline.

So, while new to Salem, I knew that projects sold as “vital” for “progress” may just be ways to burden city residents to benefit wealthier suburban and rural neighbors and development interests. In Salem, there were enough red flags to make me investigate more closely, and I soon saw virtually every hallmark of a classic highway boondoggle.

The money spent on this project is a sunk cost, and the pain stops as soon as the spending does. But there is ongoing pain that has not stopped, pain caused by the deep corrosion of trust in the network of city, county, state, and local government officials and staff who have managed the SRC EIS process. Thus, even after ending this EIS by adopting a “no build” recommendation, there is more you need to do to address the forces that made this process go so expensively haywire.

To address that collapse in trust, I urge the Salem City Council to commission a “lessons learned” inquiry into the SRC EIS by convening and funding a serious independent panel with expertise in public policy, project management, and public involvement to study the project from start to finish. The goal would be ensure that the complete record of this project is preserved and that everyone connected with it is interviewed, so that a penetrating, unvarnished history and analysis can be published in two to three years.

We need such an inquiry because we very much need to understand the root causes that made the SRC process go so badly astray. Right now, Salem is updating its comprehensive plan and wrestling with structural deficits caused by past unproductive development decisions, so we should understand the weaknesses in how we make such crucial decisions.

If we can identify what caused the Salem River Crossing project to go so badly and expensively off-course, we may be able to avoid repeating those mistakes in the future and to help all Oregon.

We are coming into an era of unprecedented challenges and painful consequences felt from decisions made long ago. So we have neither the time nor the money to repeat the mistakes that plagued the SRC in the future. We face serious, rising environmental threats, systemic and growing fiscal shortfalls, and ever-wider and deeper inequality and poverty in our city. Thus we cannot be satisfied just to pull the plug on the SRC. We must also seek to understand what kept the SRC on the front burner of city politics for over a decade, consuming resources and attention needed to address many more serious problems in our community.

After your meeting Monday, I expect I will be able to give two loud cheers for your decision to select the “no build” option as the outcome of the SRC EIS. For the full three cheers, and for the benefit of all Salem, please also commission a post-mortem study of the SRC EIS project, so that we may salvage some learning from the SRC process and do better in the future.

Cordially,
s/ John Gear.

To: CityRecorder
Subject: Fwd: Testimony for Salem River Crossing hearing set for 2/11/19

Mayor Bennett and City Councilors,

I am adamantly opposed to building the Salem River Crossing Preferred Alternative because of the enormous expense and imposition of the elevated structure parallel to Edgewater Road in West Salem. The project includes widening roads making more heated surfaces when summer temperatures have increased over the past few years and encouraging more driving. It will also increase more demand for parking which means more pavement/impermeable surface in a city where flooding is a problem.

How will this be funded? Several years ago, as I recall, the sources were 50% from the City of Salem, 25% from the State and 25% from Marion and Polk counties. Since then, I've not heard differently.

In addition to the cost of building the bridge, funds will be needed for maintenance and there seems to be opposition to having users pay tolls which could be used for maintenance. If the folks who insist on having this bridge don't want to help pay for maintaining it, they don't need the bridge. In my opinion the wise move would be to apply the recommendations of the Congestion Relief task Force.

The money anticipated to be spent on the Salem River Crossing would be better put towards an enviable, reliable transit system. Commuters can use the time riding buses to text, email, play games or do searches on their phones.

I urge you to vote No Build.

Joan Lloyd

Subject: Bridge Consideration
Attachments: The Proposed Bridge.docx

Counselors -

I recognize you will receive hundreds of pieces of input but felt my input would be added to the pile.

Thank you for your efforts to make a difficult decision, one that will be contested either way it goes.

The Proposed Bridge

Salem currently has two bridges that bring people together and one bridge proposal that is tearing people of Salem apart. This bridge proposal is much like a “wall”, it is based on perceived benefits that are not supported by facts, developed by a flawed process and advocated by arguments that ignore current realities. There is no doubt that a regional transportation connection from the west side of the river to the east side is needed. There is no doubt that congestion on Wallace Road is annoying. However, the current proposal will resolve neither problem.

We are told that regional elected officials are strongly supportive of the bridge proposal to resolve regional transportation issues. It is easy to wish that others (the citizens of Salem) will pay for a regional solution. Other elected officials in Marion and Polk Counties voices will ring less hollow when they come up with a quarter of a BILLION dollars to help pay for a regional solution.

The green shirts have argued that the bridge will solve congestion in West Salem. The EIS studies put those arguments to bed. The current proposal will only shift congestion around along Wallace Road. Their chant of “build it now” sounds like a desperate hope that “something is better than nothing”. In conversations at the neighborhood association meetings in West Salem the common complaint is about congestion in West Salem. The current proposal will only change but not remedy the concerns. I, for one, am not ready to pay my share of somewhat more than half a BILLION dollars and not see a change.

It is poor public policy to choose an approach when the process agreements were broached, goals have shifted, the publically supported concerns are not likely to be resolved and the cost is both beyond current capacity and fully undetermined.

You will be accused of wasting funds used for an ungodly expensive EIS but that will only be if you do not learn to be true to the planning process agreed to, not develop political designs without resolving public concerns, and relying on poorly defined goals in the future.

I urge you to approve the no-build option. Do not build the wall, work to resolve the current issues of congestion and work with the community to identify cost effective approaches to addressing transportation needs in Salem.

I have lived in West Salem for 40 years and commuted across the bridge for more than 35 years, I find the current infrastructure serviceable and convenient.

Subject: Third Bridge

Council:

I am just a regular, tax paying citizen who has lived in West Salem my entire life. I would like to provide three points to consider before you decide whether to kill the third bridge.

- 1) I did the math this weekend and realized that I have to work approximately 200 – 250 hours every year just to pay my property taxes. How many people in Salem had to work for how many hours to pay the 6 million dollars that has already been spent on this project? If the bridge isn't built, that money and the work it took the citizens to make it will be metaphorically flushed down the toilet.
- 2) I understand that if traffic is awful, both in West Salem and downtown (where I work), you hope people will start walking, riding their bikes and taking public transportation. However, for most of us that is simply not a viable option. Every morning I take my oldest son to school and get to work by 8:00. I take my lunch break at 3:00 to pick up my youngest son from school and take him home (a bus is not available for him). Then, I go back to work until 5:00, at which point I get in line on Marion Street to go home with everyone else who lives on the Westside. If you want me to stop driving over the bridge three times a day, I would ask you for a specific and currently available alternative? I would also like to point out that I am not special or unique, most of the working parents I know are in a similar situation.
- 3) Finally, please don't pretend this is an issue that only affects those who live in West Salem. We have all seen what happens when there is an accident or stalled car on either bridge. It backs up quickly onto Highway 22 and can shut down Salem streets all over – and not just downtown. Additionally, what is the City's plan if there is ever a minor earthquake? We all know the older bridges will not be usable, so how are those of us who work on this side of the bridges going to get back to our children? How will supplies get to us if there isn't a newer, more durable alternative to cross the river?

Thank you for your time and consideration.

Message	Please advocate for building a third bridge over the Willamette river. I crossed the bridge daily from Monmouth to Keizer as a teacher for 14 years. I was joined each morning with commuters from Dallas. Often if I suspected an accident I had the opportunity to reverse directions and go through Independence. Once you were near Eola that choice was gone and you were stuck. We are bedroom communities to Salem and invest in its growth and economy. Opening another bridge invites our participation in the life, economy, and welfare of Salem. Thank you.

Subject: Agenda Item 5a Please adopt the Take No Further Action Option

Mayor Bennett and City Councilors,

I am writing to urge you to take **No Further Action** on the Salem River Crossing Project.

I laid out the reasoning for my plea in an earlier e-mail after your work session on January 30 and I will not add another long e-mail to the pile that I am sure you already have to read.

But I would be remiss if I did not repeat: this plan will do much more harm than good.

It will burden taxpayers and/or toll paying motorists with enormous debt - much worse than any planners have been willing to admit.

It will devastate Wallace Marine Park, the Union Street Railroad Bridge, Highland, Edgewater and Pioneer Village neighborhoods. These are community assets we cannot afford to lose - please act to protect them.

It does nothing to alleviate traffic congestion.

We already have bridge redundancy in Salem.

Please kill the Salem River Crossing Project on February 11, 2019. Don't waste any more time or money.

Thank you,

Linda Bierly

Message	<p>Dear City Councilors of our beautiful city of Salem, I am a West Salem Resident residential property owner and a West Salem business owner of multiple business. My wife and I have 3 young children and my Mom is a resident of Salem Towne in West Salem and my Grandmother is at Windsong retirement center in West Salem. Please be aware that I not only speak for all of them but I also voicing opinions of that of everyone I interact with on a daily basis that may not of reached out that a new bridge is vital. I talk to people all day, every day and not one time have I ever ran into anyone against it. In fact all are desperate for it. There is a simple voice that it is irresponsible of anyone not to only be for a new bridge but all should be pushing to get it done faster. I am writing today so this is heard by each and every member of the Council. My list of reasons for a third bridge is LONG but the biggest and most important should be bipartisan and that is the safety of all. A new modern engineered bridge would ensure we would be able to cross the river in a natural disaster that we are due for. Emergency services plug up the bridge daily and response times lack because of it. What is something big happens? What is something happened to even one bridge. It would take years to fix. A new bridge eliminates all safety concerns and that alone should create a new bridge. I don't think those against the bridge really understands how bad it is. Just one day driving my route and you too would be for it. My personal immediate impact is that of my children. I spend at least an extra 15 minutes a day in waits to go over the bridge. That 15 minutes every day I don't get to spend with them, 5 days a week and that turns into 65 hours a year VERY conservatively. I think my appropriate number is a 100 extra hours a year just getting back and forth extra in my car in regards to West Salem. Any high traffic times or wrecks make it much much more. Environmentally that is my car running that should not be. Often after dropping my kids off at school I am late to meeting anytime there is every any kind of traffic mishap or wreck. Even a stalled car plugs up hundreds of cars with no good route of detour. I have been late to obligations over 10 times this past year solely due to bridge issues with traffic and it is only getting worse. Clients don't want to come to West Salem cause of the bridge traffic as well and my business's would improve with another bridge to help facilitate people and create jobs. I could honestly go on and on and on with this issue. Even if approved now it would take years and its already too long. It is a desperate situation as people just won't stop moving to Oregon. There just won't be less people and the West Salem growth is high</p>

	not to mention access to the coast and supporting cities like Dallas, Monmouth etc. I live it each day and I can tell you a 3rd bridge is a desperate situation that must be passed and must be built. I don't think that not doing it at this point should even be discussed. I kindly ask that Salem moves to accomplish the 3rd bridge without hesitation and move all efforts to make it the best it can be. All efforts should be how to figure out how to best do the bridge and how to get it done as fast as possible. Regards,

Subject: re: Third Bridge Unanswered Questions

The city is running a \$7 million deficit, has 1000+ homeless persons in our community and lacks affordable housing and we should be spending money on some gigantic piece of concrete called a Third Bridge? REALLY? That's not what the people of Salem want or need despite noise coming from some quarters. There are so many unanswered questions it's mind-boggling. Between 7 -8 a.m. and 5-6 p.m. the persons who commute over the Marion Street bridge—how many live in Monmouth? Independence? Dallas? West Salem? How many are state employees and drive into downtown Salem? What other part of Salem do they commute to? What are the statistics/demographics of the commuters? Would a shuttle from a West Salem Park and Ride that circulated downtown alleviate enough traffic to make a difference? Is the bridge really the problem or are the feeder streets the real culprits of traffic congestion? Would HOV lanes help? Would getting rid of lights on Front St. from ramp to Commercial help with traffic? All of these questions need to be addressed and a solution for our traffic problems will emerge. Just going for the developer dream of a 3rd bridge is fiscally irresponsible.

Everyone concerned about a Cascadia event----I don't think any bridge will survive regardless if it's new or retrofitted. The streets will be not be drivable—upended cement, light poles down, etc. The idea of any emergency vehicles going anywhere is inconceivable.

There are limited resources and limited time—use both wisely and let the 3rd bridge die a nice quiet death—maybe not so quiet but dead is the right direction.

Subject: Salem River Crossing

Dear City Council:

I do not support the development of the 3rd bridge for a number of reasons. I understand that traffic is bad and I have been caught in traffic jams across the bridge where nothing moves. I understand that the traffic exceeds the capacity of the bridge to handle the volume.

However these factors were never considered in the development of West Salem and Dallas as bedroom communities when construction was being done. No one ever asked how we are going to move the people who are moving into these communities to the economic hubs on the other side of the river. The enormous McMansions with expansive views of the valley were constructed with no idea on how residents were going to commute to their jobs across the river. Cherriots has added a commuter line to relieve part of the congestion and those buses are empty most of the time I ride them. For those residents the car is the only way of life.

When I work in Dallas in the schools I talk to students whose parents moved down from Beaverton or Lake Oswego and still work up in the Portland area.

I know that as a resident of NEN my area is already impacted by commuters: Center Street, State Street and Market Street. I compete for on street parking with commuters in order to park in front of my house. Any bridge development will come with road development which will include destroying front yards in order to accommodate increases in traffic. I live in this area so I can take the bus, train, walk and enjoy being out of a car. Subsidizing West Salem and Polk County development with another bridge does not make sense to me. People who live there have difference values: They do not use public transportation and want those of us who live in the older neighborhood to sacrifice our livability for their lifestyles. I urge a no vote.

RE: Support for Salem River Crossing

Dear Mayor Bennett and City Council Members,

I am writing to strongly urge you to fulfill the actions outlined by the Land Use Board of Appeals decision and move forward with obtaining the Environmental Impact Study in order to finalize the first phase of the Salem River Crossing project. Stopping the process now is short-sighted, contrary to the City of Salem's growth and development plans, and shows total disregard for impacts that the current transportation infrastructure has on the region.

There are currently 331 new apartment units under construction at Orchard Heights Rd and Linwood St. NW, which will add hundreds of new commuters to the frequently bottlenecked Wallace Rd. This is an example of the short-sighted planning the city has when it comes to dealing with its citizens on "the other side of the river". The new apartment complex is just one of the new developments in West Salem that will increase traffic congestion not only for Salem residents but for those traveling through the area from other parts of Polk County and Yamhill County. So far, the conversation around the new bridge has been hyper focused on downtown Salem with sometimes total disregard for the rest of the region that daily commutes through West Salem and over the bridge. As a former West Salem resident, there were times that I was trapped in West Salem because of an accident on the bridge, and all roads out were stopped. Driving to Independence to cross the river is not a viable option for getting to downtown Salem, although it is sometimes necessary.

Your dialogue around this issue is elitist. Getting people out of cars to use public transportation or ride bicycles sounds nice, and I'm actually an advocate for that, however, we do not live in an urban area; Salem is quasi-urban presenting mostly as a large suburb. We do not have the infrastructure of urban areas that successfully promote the use of alternative transportation. We do not have a robust bus system. We do not have the cultural mentality that encourages residents out of their cars and onto a bus or bicycle. Expecting that a family get to/from work, school, sports, after school activities, doctor appointments, social activities, etc. on bicycles in a place known for its rain, or take public transportation when the routes, schedules, and bus stops are limited and inconvenient is

an example of how this council approaches city issues from a selective and unrealistic position, discounting most of the city's population.

The current bridges across the Willamette River in Salem comprise a state highway. Your narrow-minded decision making not only has daily impacts on the residents of Salem, it impacts local and state commerce, families vacationing to the beach, and emergency operations. Your decision will have a regional impact that may knock Salem out of the competitive arena for job growth, development, and the ability to meet the needs of the citizens of Salem as the population grows. I urge you to consider the impact this project has on the region and the state, and keep the project moving forward.

Thank you for this opportunity to comment and your consideration and thoughtful decision making.

Sincerely,

Lisa Trauernicht

Subject: 2/11 Council meeting

Dear Matt,

Thank you for your service to Ward 5 :-)

I plan to be at the City Council meeting on Monday. I am so looking forward to being there for the final vote of "No Build" for the Salem River Crossing Project. As one of your constituents who has been in opposition to this project for years and testified at public hearings and attended regional meetings, many workshops and study sessions on the Bridge I urge you to vote in favor of "No Build".

You have heard me say this multiple times: I moved here from Seattle; there is no traffic here.

I can see Sunnyview Rd NE from the window of my house on Park Ave NE. Most work days around "rush hour" traffic is backed up headed eastbound from Hawthorne Ave NE to Park Ave NE. That's 8 blocks. I have miscalculated my timing and arrived during "work exodus" in the gridlock that is at Center St NE and 17th Ave NE where it takes 3 traffic signal changes to get through the intersection. There are other similar jams around town - it's NOT just "The Bridge". But developers want to build in W. Salem with the big new schools and the white neighborhoods rather than in the NE where the schools are old and not considered as well supplied and the neighborhoods are less white. "Progress", "Growth" and "Development" create traffic. Retail businesses want to locate in high traffic areas. Traffic is a sign of prosperity -- and it's all over Salem, not just the Bridge.

Most of Salem was developed before the Cascade Subduction Zone was discovered. Luckily, the most suitable seismologic location for a bridge happens to be where our 2 bridges are. But people still operate under the mindset of pre-subduction zone bridge building possibilities. The current proposed 3rd Bridge would go over a gravel quarry which needs to be filled in (cost not in the proposal) and would become a liquifaction zone in the event of an earthquake. Wrong place to put a bridge. Especially one not designed to withstand a 9.0 Earthquake.

The work session on Jan 30, 2019 was highly attended by green-shirted people who have no idea where the money is coming from to pay for the 3rd Bridge. I was at both the afternoon and evening financial workshops for the SRC project. Both workshops got to use a computer model to tweak the numbers to find a way to pay for it. The table I worked with in the afternoon was populated by mayors of local small towns and some folks from a government agency. They plugged in numbers in all the fees and taxes until it came up with the required amount of revenue. It was a game to them and they solved it. The evening workshop was for the general public. After the instructions were given and participants got to insert numbers for fees, taxes and tolls many of the people left in frustration and disgust because they could see how much it was going to cost them and they didn't want to pay for it. I can't justify the cost and expense to save a few minutes of time for folks who live on the west side when I hardly use the bridge and would end up paying for it. I'll pay for fire stations and libraries and schools but not for a few extra minutes of commute time for west side folks when east side folks also have to endure traffic and congestion and a few minutes more to get to our destinations.

With all that I have learned from my involvement with stopping the SRC project I could add more reasons to vote for "No Build" but what I have presented here should be enough to add to my previous public comment and written statements. I think it's time to get this project dispatched to the round file and officially end it. Please vote "No Build".

With best regards,
Maryann Beirne

Subject: Salem River Crossing - Agenda Item 5a

Mayor and Councilors:

It's time for the city to move forward with reasonable, affordable solutions to improving Salem's river crossings. More than 10 years of study show that the SRC "Preferred Alternative" is not a workable solution: completing the EIS would commit the city to a huge regional bridge that we cannot afford, that would be ineffective in reducing traffic congestion, that would seriously damage parks and neighborhoods and that would do little, if anything to improve emergency response or prepare our community for a major earthquake.

Rather than waste more time on planning a huge, unaffordable bridge that won't solve our problems, the city should move forward with other actions that we can afford and that will make our existing bridges function better: including seismic upgrades, updating our emergency response plans and implementing recommendations of the council's Congestion Relief Task Force.

Bridge studies and available information study demonstrate conclusively that the so-called "preferred alternative" is unaffordable and would be ineffective:

The SRC is not financially feasible

- The SRC is estimated to cost at least \$425 million, but it's likely to cost \$500-700 million or more because the estimate does not account for:
 - inflation in construction costs over the next 5-10 years or more
 - replacing the Rosemont exit,
 - building an earthquake resistant bridge, or
 - filling a gravel pit lake in the path of the bridge.
- Even at only \$425 million the SRC would cost roughly as much as the region expects to have for all roadway expansion projects from all sources (local, state and federal) for the next 20 years. And those funds, totaling \$430 million, are already committed to other needed transportation projects.
- The idea that extra state and federal funding would be forthcoming is simply a pipe dream: the federal government has ended the practice of earmarks and new state revenues approved by the Legislature in 2017 are committed through at least 2025.
- There is no funding plan for the SRC and little, if any, support for additional local funding that would be required, which would include a combination of increased gas taxes, vehicle registration fees, property taxes as well as tolls on all bridge crossings. Together, these additional fees and taxes would cost a typical West Salem family more than \$1200 a year.

The SRC would be ineffective in reducing traffic congestion

- Bridge traffic studies show that regional traffic congestion will roughly triple over the next 20 years whether the 3rd bridge is constructed or not.

- A new bridge would simply move congestion around - from bridgehead area to NE Salem neighborhoods: the same number of intersections will be congested - it will just be different intersections without a significant reduction in overall congestion.
- The congestion reduction benefits of a new bridge are overestimated because the models we use don't accurately account for additional trips or travel that would be caused by a new bridge. Studies and experience from around the world show that we cannot build are way out of congestion: adding capacity encourages additional travel that quickly puts us right back where we started.

Improvements to existing bridges are a more affordable and effective way to address traffic congestion, improve emergency response and improve the city's resilience to a Cascadia subduction zone earthquake

Because the SRC is unaffordable, it is unlikely to be built: a solution that cannot be built is simply not a solution. More importantly, existing plans and bridge studies – including the city's adopted Transportation System Plan, and the recommendations of the Congestion Relief Task Force – show that there are a range of affordable actions that the city can take to make existing bridges work better. The city should shift resources spent on bridge planning to implementing these realistic and attainable solutions. These include retrofit of the existing Marion and Center Street bridges to withstand a Cascadia earthquake and updating the city's 10-year old emergency response plan.

Approval of the EIS is not a minor procedural step: it would legally commit the city to a big regional bridge

Bridge proponents have suggested that city action to approve the EIS is simply a minor procedural step that “allows the process to move forward.” This implies that future decisions would allow the city to decide what kind of bridge it wants or needs or can afford, such as a smaller bridge. That implication is wrong: city action on the EIS involves amending the city's comprehensive plan to authorize and allow the SRC “big bridge” Preferred Alternative. Amending the city's plan would commit the city to pursue and allow the big regional bridge and connecting ramps and roadways as they are described in the EIS. Further, any changes would require amendment to city plans and agreement from other local governments in the region – virtually all of whom have argued for the big regional bridge.

In sum, 10 years of study shows that the proposed SRC is a bad deal for our city. Approving the SRC would commit us to a “solution” that we cannot afford and that would do little, if anything, to reduce traffic congestion. The Council should instead opt for the “no-build” alternative and move forward with other affordable, effective actions to make our existing bridges work better.

Sincerely,

Robert Cortright
West Salem

February 11, 2019

TO: Salem City Council,
FR: Steven A. Anderson
RE: Salem River Crossing Project (Agenda item 5a)

Salem City Council,

Our community has expressed interest in a third bridge, but not this one.

Yes, we need a new bridge, but not this one.

Why?

- Our community is seeking congestion relief solutions, but the Salem River Crossing project does not fix our congestion problems
- It does not meet the needs and goals justifying its' purpose in the project statement
- It does not provide for the economic development that Polk County is looking for
- It will severely impact the environment and livability of our community
- There are other, less expensive, solutions

How did we get to this bridge crossing proposal that does not work?

Primarily it was a cost issue. The Salem River Crossing project (as explained by an ODOT Transportation Planner to the WSNA May 2018) was the result of compromise and tradeoffs that removed congestion relief from the decision process criteria. He further stated that it would not relieve congestion at intersections along Wallace Road when built.

- The ODOT webpage for the project admits that it will not reduce congestion
- Congestion relief was not part of the project modification process
- As explained at the January 30, 2019, City Council work session, the current project was altered to:
 - Save cost by reducing lanes on the bridge from 6 to 4
 - Save cost by not making intersection improvements at Orchard Heights and Glen Creek
 - Save cost by not evaluating how to fix congestion when the Rosemont Exit is closed (analysis and decision postponed to a later date not certain)
 - Save cost by changes both East & West bridge approaches (elevated to surface)
 - Save cost by changes West Salem north-south connector from elevated to surface roadway

We need a new bridge, not this one.

The Salem River Crossing project does not solve congestion and related problems as it has been touted to do. ODOT, SKATS and Salem City Staff publicly, and in documents, repeatedly cite congestion relief as its' primary purpose.

- It fails to provide congestion relief
- It does not meet the needs and goals stated for justifying its' purpose per the project statement
- It does not provide for the economic development that Polk County is looking for
- It will severely impact the environment and livability of our community
- There are other, less expensive, solutions

Subject: Pls build bridge 3

Hello city Counselor,

I am a resident of South Salem. I don't usually have to go to West Salem but the traffic is so horrible in the mornings and evenings from congestion going to and from West Salem that I avoid down town because of it. Please work to remedy this.

The areas around the current bridges are built out extensively, I think it is time for a new bridge a little further North (Wallace toad in west Salem veers north). Please don't listen to the people who say the problem will disappear, the current situation has shown this isn't true. Bikes aren't used as extensively as hoped and traffic is still bad. (This is largely due to electric and hybrid vehicles, which have eased the environmental pressure to used bicycles). There is no demographic evidence that shows that a 3rd bridge would go unused.

Thank you,

Sam Bassett

Subject: Monday's Council Meeting

Mayor and City Council Folks,

I don't think I can talk myself into testifying yet again on the subject of the bridge so I will write this one last brief letter. I have no doubt that Climate Change is by far our greatest challenge. We need to worry about reducing driving/GHG emissions and 1000 other things that will keep the earth (and Oregon) habitable. What difference will a few minutes saved on the bridge commute or more money in some developers and real estate people's pockets make compared to clean water for all, enough food for all, and a climate which allows us to continue to live where we want to.

Please please come down on the right side of history and vote for the 'no build' choice and then get on with making Salem the green, livable community if can be. I stand ready to help.

Sincerely,
Sarah Deumling

Subject: Don't Kill the Bridge

My name is Sarah Smith and I am a resident of West Salem. My address is 2295 Gibsonwoods Ct NW. I am writing you because I am unable to attend the city council meeting on February 11th. I understand people will be speaking both for and against the building of a third Bridge. I would like my email to join the voices in favor of moving forward with planning the infrastructure that we need. I work for the state of Oregon Department of Justice downtown, which means I'm crossing two ways, five days a week at minimum. My husband Michael also works for the state of Oregon and works in South Salem, so he is commuting across the bridge as well. We don't like driving this much, but currently commuting together is not possible. But I'm actually not here to complain about our commutes. We choose to live in West Salem for a sense of smaller community and for the schools and our church. Most of the time, commuting traffic is ok & is not my biggest concern right now (although I am concerned how much worse it will get given the residential population growth inherent with the expanding neighborhoods and apartment complexes on the west side of the river). The larger concern is the lack of options when the bridge is in gridlock or shut down. Having major highways converge in a bottleneck at the Center Street and Marion Street Bridges, connecting I-5 travelers to the beach and vice versa, as well as work commuters from outlying areas (Dallas, Monmouth, Independence, McMinnville, etc.), as well as being the only route for semi trucks, log trucks, hay, milk & gas trucks to cross the river in Salem [side note: I'm sure the owners of these delivered commodities are just as frustrated their drivers only option is to drive through the inner city/downtown to get where they need to go] - when there IS a problem, the current setup is an infrastructure nightmare that really can't be ignored anymore.

People need to get to the hospital, people need to get home to their children. I have multiple personal experiences where because of a car accident, or bridge shut down for police work, it took me many hours to go only a few miles.

I don't know all the details about the current Salem River Crossing proposal, but I understand that some City Council Members disagree with it because of the cost and/or where the bridge designed to go. Yes, the cost is large but will only continue to increase if the project is put off. If the current proposal is unsatisfactory as far as location or impact to the community, then figure out a new one. It's inevitable & undeniable that Salem must have more infrastructure for the growth of our community. Let's figure it out. Let's bring in the counties and the state governments to fund and plan this project, because it should not be the burden of the City of Salem alone.

Please do not kill the bridge!

Sarah, Michael, & family

Message	<p>Dear Mayor and City Councilors I am opposed to the third bridge. Here's why: • It's impossible to build your way out of crowding. We're looking at the problem through the wrong end of the kaleidoscope. o It's an issue of population growth, not transportation infrastructure • Saying "no" to a third bridge would force Salem to do a number of harder things: o Limiting growth, updating zoning to accommodating more density o Better use of mass transit – like funding it to act like a proper carrier o Incentives for walking, cycling, low cost car sharing • Building a third bridge would not guarantee it being earthquake proof o Building it, however, would almost guarantee that the existing bridges across the river would NOT be retrofitted to the same standards Tim Buckley Salem</p>

Subject: Results from survey on dontkillthebridge.com
Attachments: Letter To Mayor and City Council Feb 10 2019.pdf; Yes Votes.pdf; No Votes.pdf

Dear Mayor Bennett and City Council Members:

I'm providing the attached letter and submission results (yes and no votes) to transparently report the results of a survey collected at dontkillthebridge.com, which I built and administered on behalf of Salem Bridge Solutions.

I am urging you not to kill the bridge. Please, hear our voice.

Sincerely,

Tim Fahndrich

February 9, 2019

Mayor Chuck Bennett
Salem City Council
555 Liberty Street SE, Room 220
Salem, OR 97301

Dear Mayor Bennett and City Council Members:

This letter and attached packet are provided to transparently report the results of a survey collected at dontkillthebridge.com, which I built and administered on behalf of Salem Bridge Solutions. I was not paid to build the website or administer the results. As I have testified on numerous occasions during this long process, I am an active supporter of the 3rd bridge.

First things first; This is not a scientific poll or survey.

This was clearly an attempt to rally proponents of the 3rd bridge, and to give them an opportunity for their voice to be heard. However, there was no attempt to limit or not accept "No" responses. This website was available to anyone, and it was *openly shared by both proponents and opponents of the 3rd bridge*.

Total Responses: 2021 (as of Feb 10th, 12pm)

Duration of Collection: January 23rd – Feb 10th

Primary question:

Should the Salem City Council continue to move forward with the Salem River Crossing (3rd Bridge)?

- Yes: 1,885 | 93.27%
- No: 132 | 6.53%
- Undecided: 4 | .20%
- Total Submissions: 2,021

Respondents were also asked; **Do You Live In Salem City Limits?**

- Yes: 1,424 | 70.46%
- No: 583 | 28.85%
- Did Not Answer: 14 | .69%

Move Forward "Yes" Votes

- In City Limits: 1,309 | 69.44%
- Not In City Limits: 562 | 29.81%
- Did Not Answer: 14 | .74%

Move Forward “No” Votes

- In City Limits: 113 | 85.61%
- Not In City Limits: 19 | 14.39%

Salem Area Zip Codes

Zip Code	Yes	No	Total	% Yes	% No
97301	133	28	161	82.61%	17.39%
97302	239	34	273	87.55%	12.45%
97304	723	35	758	95.38%	4.62%
97305	79	6	85	92.94%	7.06%
97306	147	12	159	92.45%	7.55%
97317	60	1	61	98.36%	1.64%
	1,381	116	1,497	92.25%	7.75%

Move Forward "Yes" responses were asked an additional question. They could choose all, none, or multiple issues.

What Issues Are The Most Important To You?

- Population Growth & Traffic: 96.07%
- Public Health & Safety: 77.93%
- Environmental Impact of Idling: 60.05%
- Economic Impact: 65.62%
- Quality of Life: 77.98%

Responses were limited to one submission per IP address, email address, and several other identification factors.

All responses have been reported as submitted. No records have been deleted.

For privacy purposes, the raw data including full name, email address, phone number, and address, has not been shared with any third party. (My firm and I are the only ones who have access to the raw data)

To summarize, 1,885 people (93.27% of submissions) are urging you to move forward and to not kill the bridge. My voice is one of them. Please, hear our voice.

Sincerely,

Tim Fahndrich

February 8, 2019

Dear Salem City Council

Please use this letter as my support for item 5.a on the February 11th Agenda. Salem is way overdue for another river crossing. This debate has been going on for several years now and over \$8 million has been invested so far. Most of this money has come from the federal government through grants and it is my understanding that if the city chooses not to move forward, Salem could be liable for repaying that money back to the federal government. Salem is facing a \$6 million-dollar deficit and cannot afford another \$8 million on top of that. Please address the LUBA issues to keep the project on track. We need another crossing for the following reasons:

- Another 100,000 people are expected to move into the Salem area in the next 10 years. Recent census polls shows Marion and Polk counties as the top 7th and 8th growing counties in Oregon.
- It will take 10 years to complete the Salem Alternative.
- Killing this project will set us back another 25 years and Salem will be in more gridlock.
- The preferred alternative has been studied by experts, vetted out and was determined to be the most suitable location for another crossing.
- The bridge location was also proposed back in the 1970's as part of the Interstate 305 project. Wouldn't it have been nice if they built the bridge back in the 70's. It would have cost less and had less of an impact in the area (it was mostly undeveloped then).
- There are 3 highways that converge on to the current crossing and must navigate through downtown Salem. It's a bottle neck and traffic must cross each other at Commercial and Division.
- Continued growth of large apartments and other developments has been allowed to occur in West Salem with no consideration on traffic impacts.
- Over 90,000 cars cross the bridges daily, that's more than Interstate 5 through Salem. Wouldn't it be nice to move some of the traffic from having to go through downtown.
- The two bridges and roads that lead to them are at or over capacity.
- The Salem Congestion Relief Task force determined there were no alternative ways that would be a long term, permanent solution to the current congestion.
- The traffic is still going to continue to grow in Salem and the mid-valley.
- This is a regional transportation issue, not just a Salem issue.
- It is a key component to Marine Drive efficiency
- This is not a rush hour issue, congestion occurs throughout the day and on weekends.
- The longer you wait, the more it will cost.
- There is only one Hospital in Salem and one crossing to get there from the west side.
- There are no alternatives like what Lancaster Drive has (45th, Fisher Rd, Hawthorne, I-5)
- The quality of life has been impacted by the increased congestion on both sides of the river.
- Voting No will further alienate and divide West Salem from the rest of the city.

I know some of you are against the crossing. I want to ask the question, why? I have heard the concerns about the cost. There is federal and state money available to build this crossing. President Trump has introduced a budget package that involves building new infrastructure in the U.S. We should

be working on trying to secure some of that funding. Salem had no problem passing a \$600 million school bond, how is this any different?

Several years ago, the City Council was against building a convention center, it took new leadership to finally build that convention center and it has been profitable since day one. I hate to think that the city council may be perceived as not looking out for the community needs by not improving the infrastructure in this town, when it is needed and through recent surveys, and the public supports? Please vote yes to allow the City to address the LUBA issues regarding the Salem River Crossing Project.

Best regards,

Tim Hay

Message	<p>Hello, I am long-time resident of Salem. I wish to submit my interest and thoughts regarding the City Council vote occurring on 2/11/ 2019 on the continuation of studying the 3rd bridge. My understanding is that the majority of the council will be voting against continuing the study, which will basically assure that a 3rd bridge will never be built in my lifetime. I live in South Salem, so the impact of bridge traffic has less affect on my than many others, yet I still feel the impact of downtown traffic on a daily basis. I feel that it would be very short sighted for the council use their authority to kill any chance for further dialogues and study, and at the same time stick the citizens of Salem with a tax bill of close to \$10,000,000. I am outraged and angry as I feel that this is a political stunt that is primarily serving the interests of some of the councilors personal agendas. I implore that council to please consider what is in the best long-term interests for the city of Salem and vote to continue with study and dialogue.</p>

Subject: Bridge proposal

Dear Council Member Nanke,

I am writing to you with concerns regarding the third bridge proposal.

I have lived in West Salem for 14 years and my family is actively involved in both the West Salem and the overall Salem/Keizer community. As you know, travel to and from as well as within West Salem is incredibly frustrating and unreliable. West Salem Families are required to take the trip over the Willamette daily, if not more frequently. While our schools are on this side, everything else requires a trip down Wallace road and over the bridge; work, church, shopping, medical visits, and Interstate access, as well as the myriad other activities such as sports, band

concerts, swim classes etc. To be part of the overall Salem-Keizer community, West Salem residents must bear an overwhelming burden of the Wallace Road/OR 22 traffic bottleneck

While action is desperately needed to help the flow of traffic to and from West Salem, I cannot support the current “Third Bridge” proposal as it is deeply flawed. It is my hope that the City Council will act in the best interest of the community and decide to NOT move forward with the proposal as it stands now. I offer several reasons for your consideration:

- The tactics that I have observed from the group calling itself “Salem Bridge Solutions” are inconsistent with the values of our community
- The cost for executing the proposal is far too high
- Lower-cost solutions are available. The study from which the current proposal is based did not include all available options such as
 - Better access control on Wallace Road
 - Traffic flow on and off the existing bridges
 - Improvements to existing bridges in conjunction with seismic upgrades
 - Other regional solutions such as improvements to HWY 221, 99W and OR 22.
 - Interchange improvements further west on OR22 to draw traffic away from the existing bridge ramps and Wallace Road
- There is a lack of environmental context for the proposed bridge
- Any relief provided by this proposal will take decades to realize

I am not against a third bridge, I am against the current proposal for one. It is my hope that we can look for an alternate solution; one that does not include such high costs to community members and the environment. I further wish that future proposals are put forward transparently and that discussions concerning such proposals are conducted in a more civil manner.

Respectfully,

Teri A. Mohny

Subject: Bridge Poses Willamette Greenway Issues and Water Trail issues

Dear Salem City Council Members -

I am writing on behalf Willamette Riverkeeper. We work on water quality and habitat issues throughout the Willamette River Basin.

I have a few concerns with the Salem Bridge proposal. As proposed, the bridge would cross the Willamette River immediately over McLain Island. This is part of the Willamette River Water Trail, and greenway. As you know, the purpose of greenway properties are to enhance nature, and to provide opportunities for recreation.

While Salem has done a nice job over the years increasing access to nature, such as the work on Minto Brown, the pedestrian bridge and more, constructing a massive highway bridge over a wonderful element of the Willamette River Water Trail would be problematic. It would be a detriment to wildlife and the general peace in that area. Further, the route would have impacts to the adjacent floodplain. As it now stands, multiple great blue heron, osprey, river otter, beaver, as well as migratory songbirds utilize that area.

While I do appreciate that there are tradeoffs at times, basically destroying the essence of that area is not worth the cost.

I understand this has been a controversial issue in Salem for years. I think some key questions have not been adequately resolved to date. In addition to State Parks, the City of Salem has an important role in protecting natural areas, and recreational areas along the river.

Thanks for your consideration of these comments.

February 8, 2019

West Salem Redevelopment Advisory Board
350 Commercial St NE
Salem, OR 97301

Urban Renewal Agency/City Council
City of Salem
555 Liberty St SE
Salem, OR 97301

The West Salem Redevelopment Advisory Board (WSRAB) is advisory to the Urban Renewal Agency on matters related to building rehabilitation, new development, housing, transportation; along with additional duties in the West Salem Urban Renewal Area (WSURA) as described in the West Salem Urban Renewal Plan. During their meeting on Wednesday, February 06, 2019, WSRAB unanimously agreed to make a recommendation of support for the Salem River Crossing.

WSRAB recommends that the Urban Renewal Agency/City Council continue with the process to ultimately construct the Salem River Crossing, or Third Bridge, as they believe it will relieve transportation and transit congestion, facilitate new retail, business offices, and mixed-use multifamily investments, as well as create redevelopment opportunities that will increase the tax base within the WSURA and benefit the community. WSRAB members will attend the February 11, 2019 City Council Meeting to testify in favor of the project.

Sincerely,

A handwritten signature in black ink, appearing to read 'Nicholas Bondaug-Winn', with a long horizontal flourish extending to the right.

Nicholas Bondaug-Winn
Chair, West Salem Redevelopment Advisory Board
